**back up
off site**

0

**no errors after backup
recoverability verification**

Objective

- Backup your data to the cloud
- Licensing based on perpetual or monthly rental models. Use your own Veeam backup software or rent per month
- 1TB to 1PB available in 1TB increments
- End-to-end encryption of backups
- Guaranteed that all data will stay within South Africa's borders
- SLAs are available depending on your needs
- Tape-as-a-Service available with long-term archiving
- Choice of geo-location and multiple data centres to store your data
- Outsource your entire backup and replication requirements to CentralCloud

Why CentralCloud?

- Full backup and disaster recovery (DR) outsourcing
- DR simulation and compliance reporting
- Daily/weekly/monthly reporting
- Audit compliance reporting and testing
- Multiple copies of backup available
 - 2 copies included by default
 - backup to closest regional site
- Bi-directional onboarding and seeding of large quantities of data
- Your backup data stored on Windows and Linux platforms
- Tape-as-a-Service for archiving
- DR-as-a-Service for failover
- Veeam Sure Replica target
- Enterprise grade hardware used
- Highly available solution deployment
- Highly available data centres
- Veeam software used as the key enabler
- All skills and resources in house
- Project management and onboarding services
- Standard and customised SLAs and support contracts are available
- Self-restore or assisted restores
- Software WAN acceleration is available

Executive summary

Data backup, replication restore is a key component of any business. Backup to tape with off-site storage is still the normal operation for most businesses. Missed backups or not being sure that a backup was completed successfully are risks that businesses take every day - CAN YOU AFFORD IT?

CentralCloud now offers a solution where you can backup your data locally onsite, while replicating the data to the CentralCloud cloud. Once your data is in the cloud, you can choose to replicate it to an additional vault at CentralCloud or have it written to traditional tape.

If you don't have the skills or the manpower to attend to the backups, CentralCloud can take control of your backups for you, implement best practices and ensure that your data is safe.

CentralCloud has partnered with Veeam to offer Backup-as-a-Service. If you already have Veeam installed on your site, we offer the remote backup datastore based on a consumption costing for storing your data at CentralCloud. If you have different backup software, we will offer the Veeam software on a per-virtual machine (VM) monthly licensing and consumption or offer a backup software replacement model for your business. Our offering is completely flexible according to your needs.

Backup and replication are available for physical and virtual servers.

Execution

- If you don't have Veeam Backup and Replication, then please contact CentralCloud to assist you. We will install the software for you and help you to configure the software and do a backup to our cloud.
- If you already have Veeam and want to test our cloud service, then please sign on to the CentralCloud web portal and register an account, or contact your account manager to assist you.
- Request capacity size for trial. Capacity is immediately available to start backups.
- Start using the backup target and don't hesitate to ask for support by emailing sales@centralcloud.co.za
- Veeam licenses as well as capacity are available directly from our portal with your debit or credit card at <http://backup.centralcloud.co.za>

Key take-away

- Backup to tape ONLY is not feasible anymore
- Disk-to-disk backup with offsite replication is the win-win solution
- Flexible services are available to suit your requirements
- CentralCloud offers the basics, PLUS much, much more

Giving business access to class-leading computing that is secure and affordable. Journey with CentralCloud to the cloud.
